

# Instructions for curing your mila oven

Follow these instructions for curing your mila oven.

Curing your oven is critical to your oven's performance. Failure to follow these instructions can result in damage up to and including cracking the dome, impacting on heat retention.

1st day

150 C for 5 hours

Start and maintain the fire in the centre of your oven, once the fire is lit you should leave the door with approx a 2" gap. This will help the smoke go up the flue and not out of the front of the oven.

\*please note that there will be some smoke during this which is normal.

Close the door every evening to preserve dryness and heat.

2nd day

Repeat process at 177 C

3rd day

Repeat process at 204 C

4th day

Repeat process at 232 C

5th day

Repeat process at 260 C

Your ready to go, enjoy your mila oven!

# ONE MAN --- ONE HOUR
